

# VoiceCompact™

**SIMPLE** **RELIABLE** **CONVENIENT** **COMPACT** **LIGHT**

20 sec High-quality, natural voice/audio record and playback

100 years message retention (typical)

100K record cycles

Single 9 V regular battery

Black fine enclosure with strap

Size: 4" x 1" x 0.7"

Embedded DC -to - DC converter that provides normal functionality even from almost "dead" battery (below five volts)

## VoiceCompact as easy as :

**1. Record:** push and hold **red button**, hold device about 4" from the source of the sound. After finishing recording release the button. Red LED indicates record cycle. If LED goes off during record cycle - you've reached the end of memory. Single message systems: the next record cycle will overwrite the old message. Multiple messages systems: the next record cycle will overwrite the current message and keep the previous. If after starting the record cycle led is off - you've reached the end of memory and next record mode is possible only after pushing the "reset" button.

**2. Playback:** push **blue button** shortly and listen current message. led flashes shortly once when internal counter reaches the end of message marker. Single messages system: every push will repeat current message. Multiple messages systems: every push will playback the next message. If after starting the playback cycle you don't hear any sound - you've reached the end of memory and next playback mode is possible after pushing the 'record' button once.

**3. Reset(\*):** push and hold **black button** for 1 sec. Resets the current message counter and internal end of memory marker. Next record cycle will overwrite first message, next playback cycle will play first message. If you don't want to overwrite the first or the following messages you can skip messages by pushing playback button and starting record cycle when you are ready to loose current message.

\*)Only for multiple messages systems

and remember: when changing the battery, check correct battery polarity orientation keep device dry and out of direct sun beams.

VoiceCompact doesn't have a power on/off switch: it always ready to start record / playback operations and it goes automatically to the idle state when the current mode is finished.
